3. Comment:

The waste site is a soil area surrounded by six, yellow cement bollards. It is posted with Underground Radioactive Material Area signs. The reason for this posted area is not known. Cement bollards (AC-540 markers) were commonly used in the 1980's and 1990's to delineate radiological areas. Some surface radiological stabilization was done at the 216-A-7 crib in 1992. The pipeline that fed 216-A-7 crib (216-E-182-PL) runs through this posted area. *CRW*

The linear feature UPR-200-E-93 was documented as a line of decomposed contaminated vegetation that accumulated along a fence that has been removed.

4. Is the site a Solid Waste Management Unit?

Any discernible location at the Facility where solid wastes have been placed at any time, irrespective of whether the location was intended for the management of solid or dangerous waste, and includes any area at the Facility at which solid wastes have been routinely and systematically released (for example through spills), and includes dangerous waste treatment, storage, and disposal units.

☒ Yes☐ No

5. Does the site need to be addressed under a regulatory program? Check first item that applies.
